

RISK ANALYSIS METHODS AND TOOLS FOR ENGINEERING PROJECTS: AN EXPERIENCE OF ELETROBRAS FURNAS IN BRAZIL

FLAVIO SOHLER

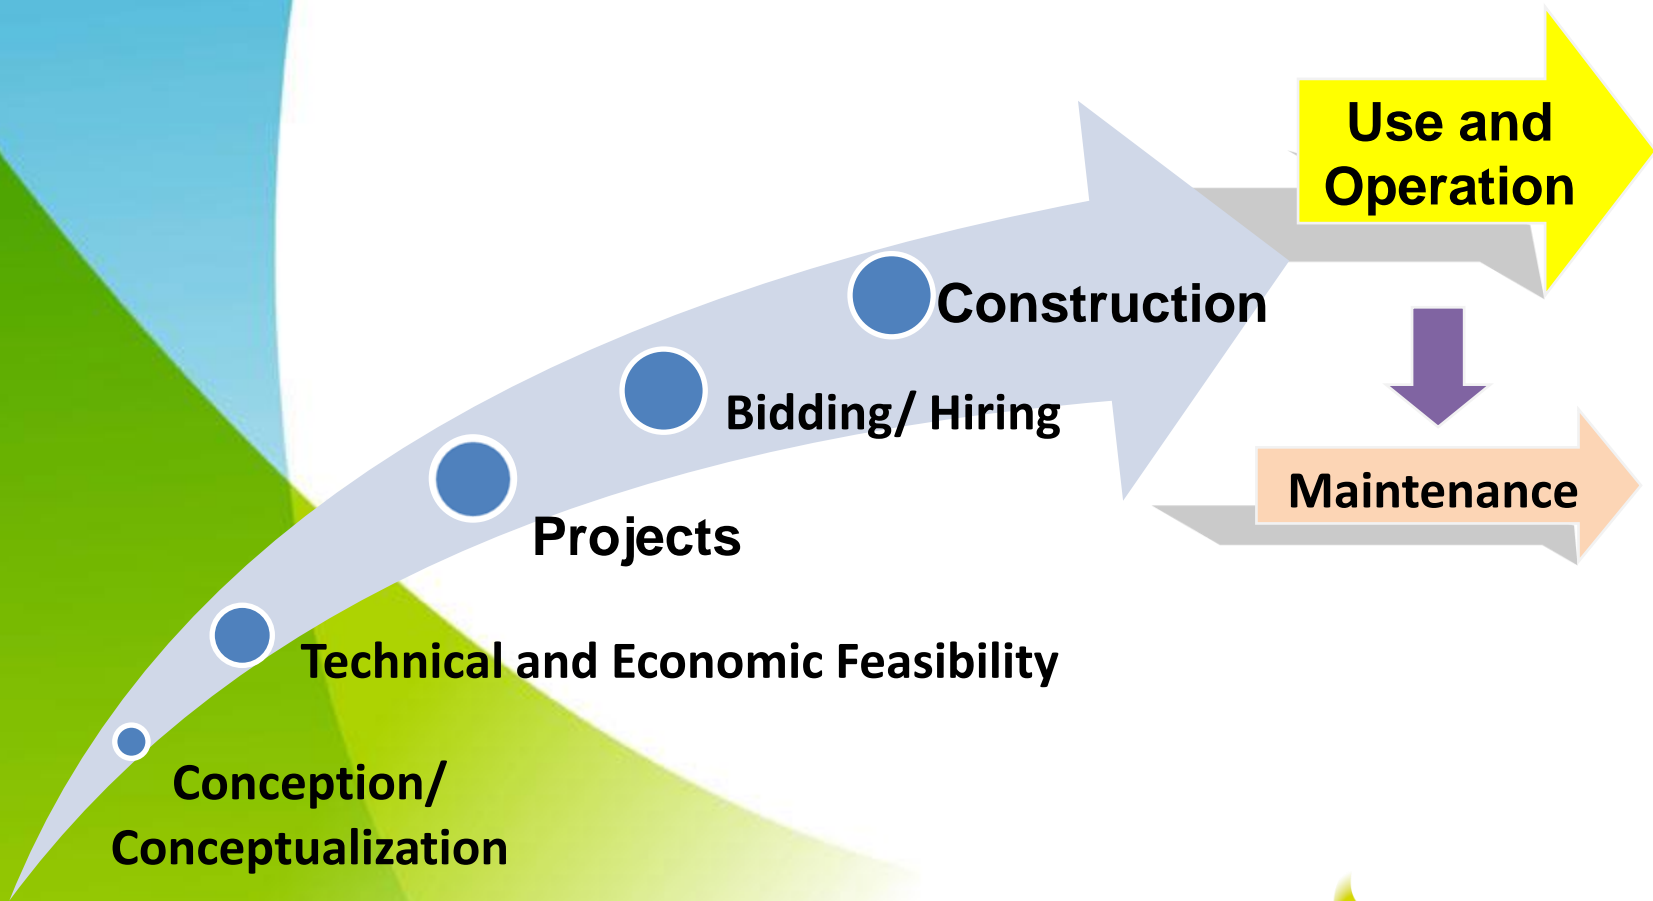

PhD., DSc., MSc., PMI-PMP, PMI-RMP

fsohler@gmail.com

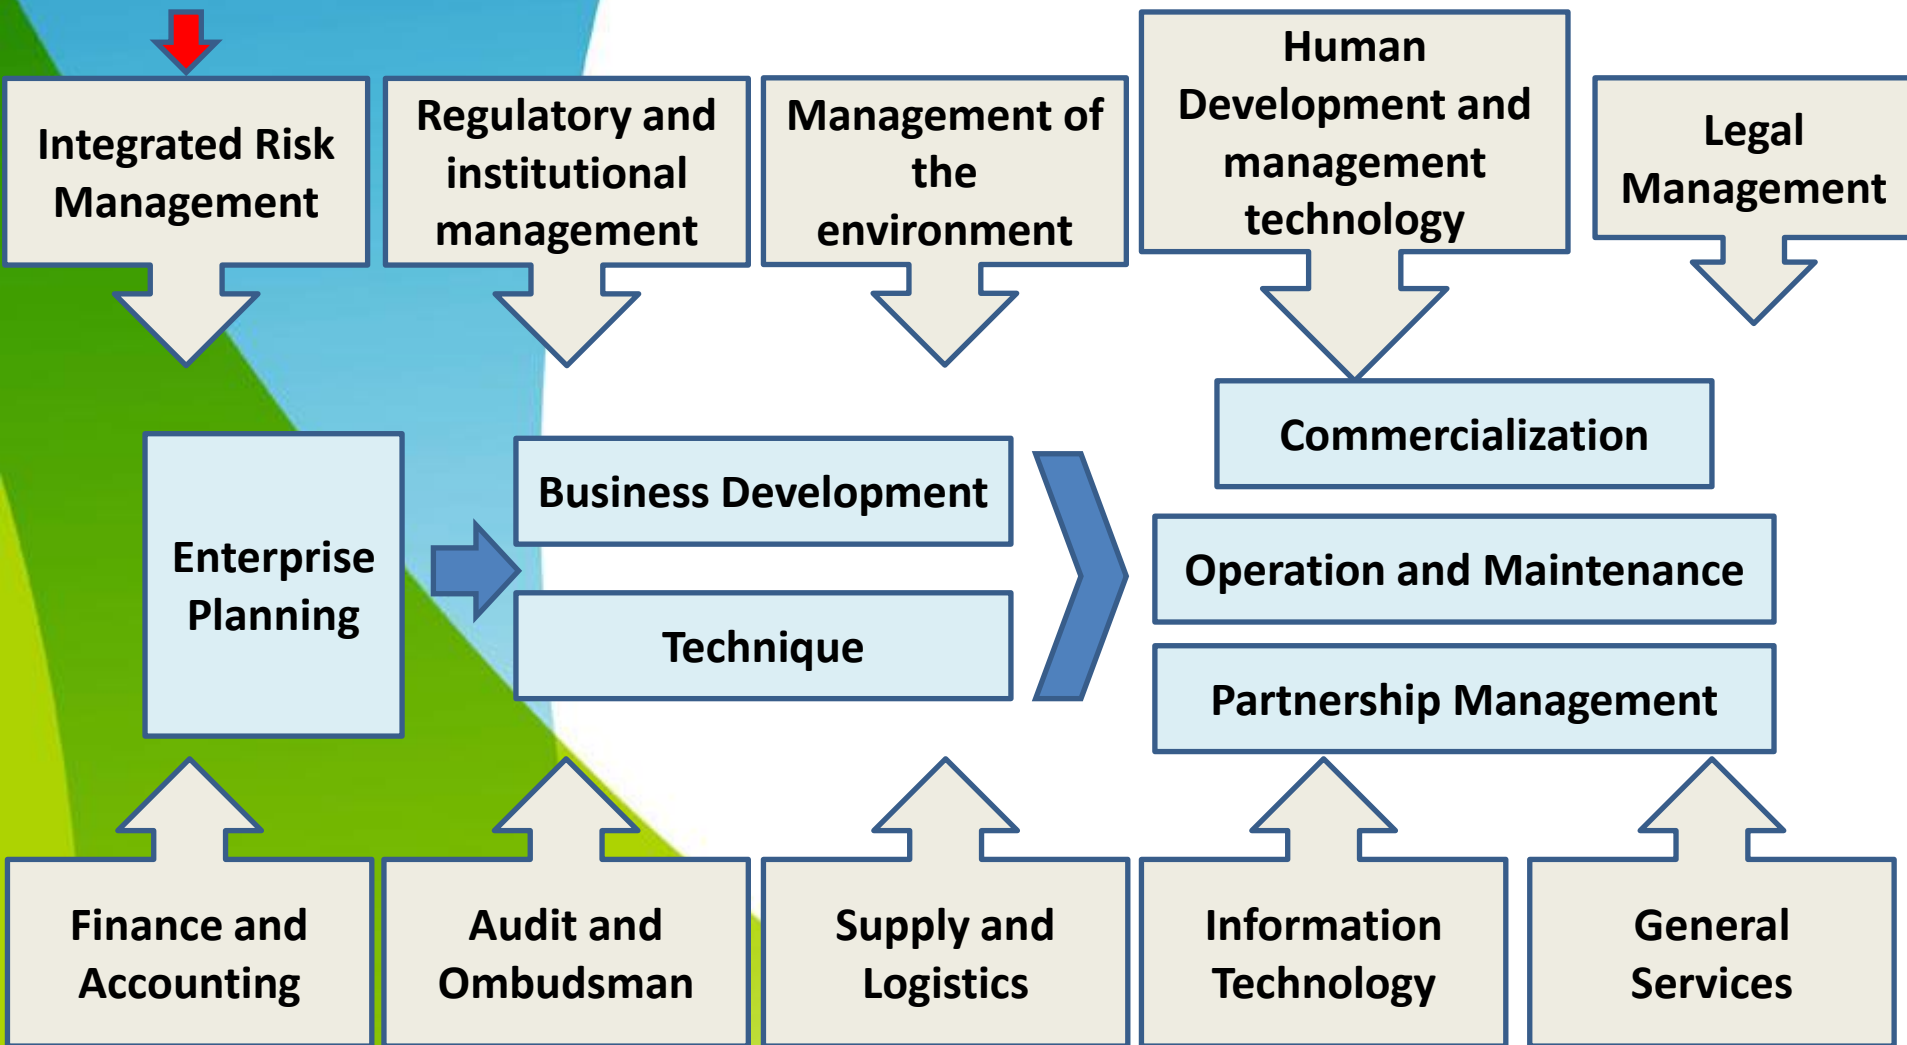

fsohler@furnas.com.br

Eletrobras Furnas Centrais Elétricas S.A.

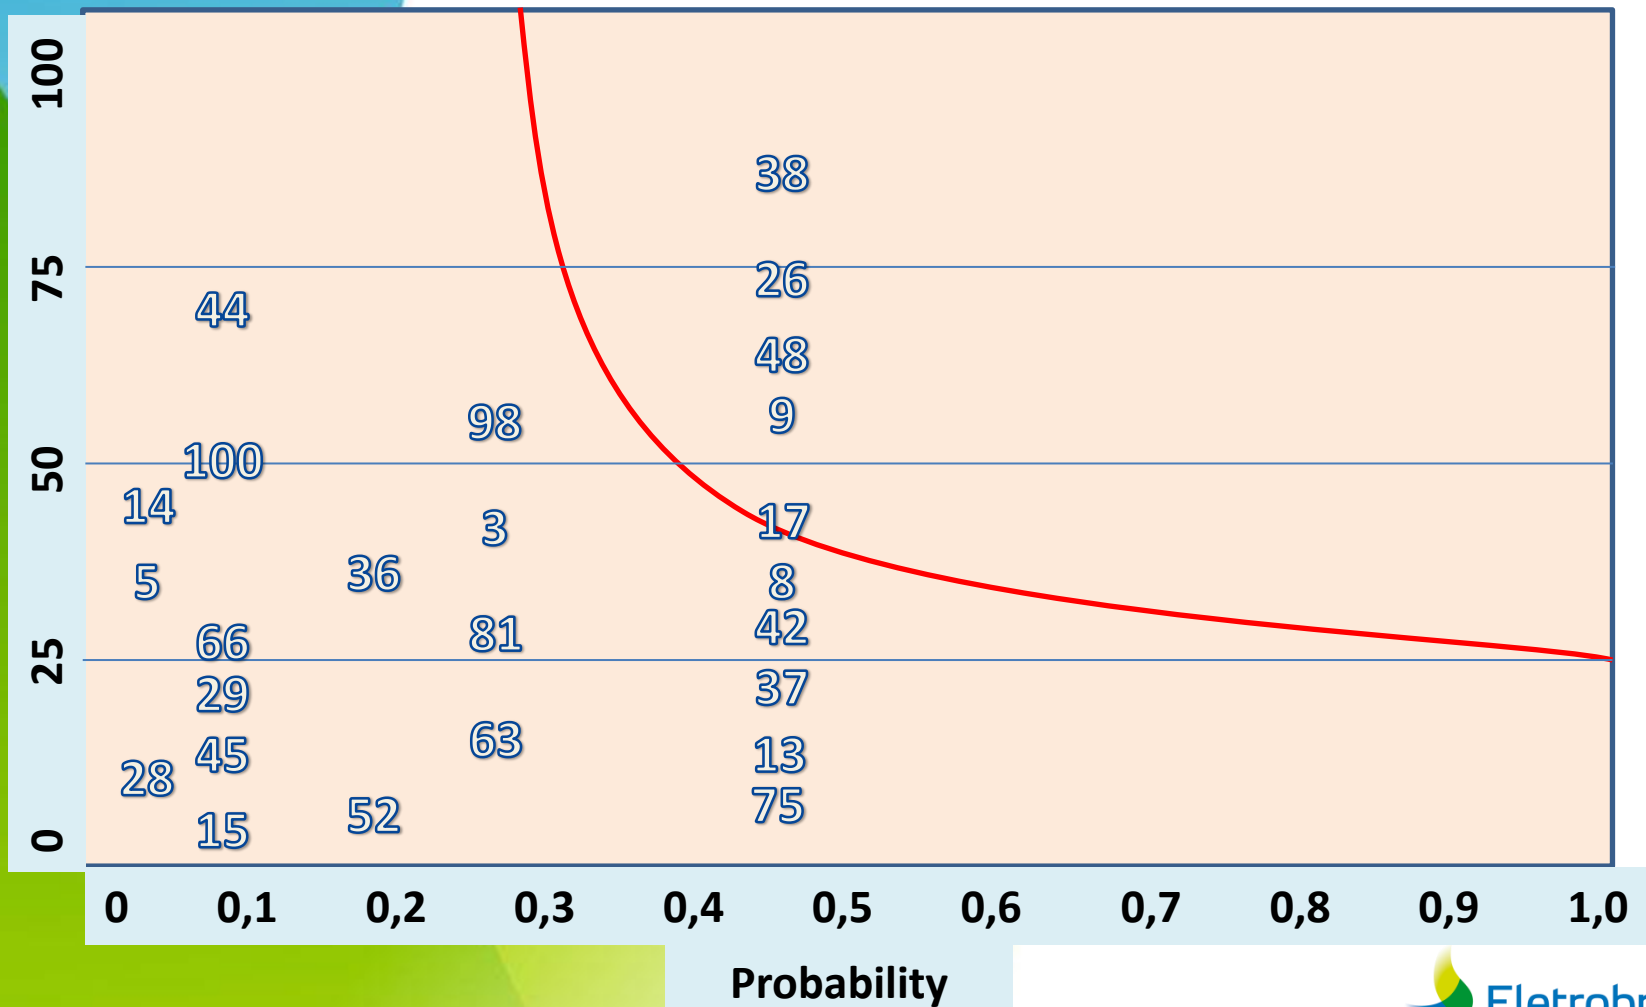

Stages of a Construction Project

I. Corporate Risk Management Master Plan

I. Corporate Risk Management Master Plan

I. Corporate Risk Management Master Plan

ADVANTAGES:

- ✓ **Created the basis for implementing the risk management culture in the company;**
- ✓ **Prioritization of Risks (Expected Value).**

DISADVANTAGES:

- ✓ **It focuses only on strategic risks and not on specific projects;**
- ✓ **It does not allow more specific risk analysis for costs and deadlines;**
- ✓ **It does not address the uncertainties inherent in a subjective process.**

II. Risk Management System in Power Generation Projects

- ✓ **Objective: Creation of software to prioritize construction risks, using the FAHP-Fuzzy Analytic Hierarchy Process methodology, which addresses the uncertainties;**
- ✓ **FAHP => Multicriteria method of decision support, addressing the inherent inaccuracies of complex decisions;**
- ✓ **Case studies => 2 Dams, 1 Eolic Complex.**

II. Risk Management System in Generation Projects

Result of the FAHP application

| PRIORITY | SERVICE PACKAGE | IMPACT LEVELS |
|----------|--------------------------|---------------|
| 1 | Socio-environmental | 40,6% |
| 2 | Transmission civil works | 17,5% |
| 3 | Complementary works | 12,8% |

| PRIORITY | RISK EVENTS | IMPACT LEVELS |
|----------|--------------|---------------|
| 1 | Project | 33,5% |
| 2 | Contracts | 22,2% |
| 3 | Geotechnical | 21,9% |

Projeto Ajuda

Gerenciamento de Riscos em Empreendimentos de Energia

The image shows a screenshot of a software interface for risk management. At the top, it says "Projeto Ajuda". Below that, the title is "Gerenciamento de Riscos em Empreendimentos de Energia". The interface features several logos: Eletrobras Furnas in the center, COPPETEC FUNDACAO at the bottom left, UFRJ at the bottom center, and a gear logo at the bottom right. The Eletrobras Furnas logo is the largest and most prominent.

II. Risk Management System in Generation Projects

FAHP application

ADVANTAGES:

- ✓ **It takes into account the inherent inaccuracies of complex decisions;**
 - ✓ **Prioritization of Risks;**
- ✓ **The result confirmed the expectations of the interviewees.**

DISADVANTAGES:

- ✓ **Difficulty in applying the method;**
- ✓ **Difficulty in in-depth interviews and content analysis;**
- ✓ **Subjectivity in the definition of service packets and risk events.**

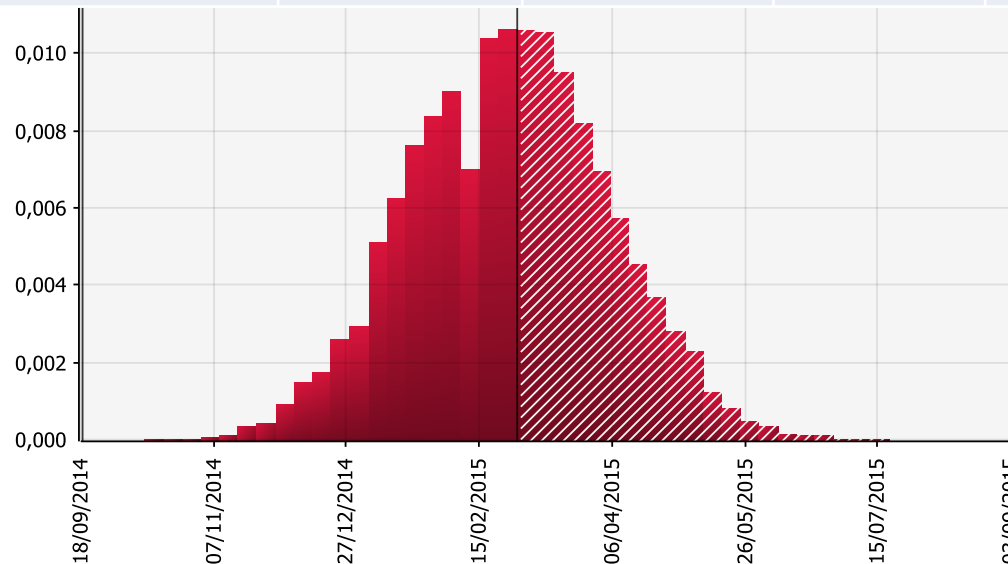

DIFFICULTY OF APPLICATION:

- ✓ **Not understanding the method;**
 - ✓ **Tiredness of the interviewee;**
- ✓ **Tendency to choose extreme degrees of preference.**

III. Risk Management System in Generation Projects

Impact on the Project End's Date

| | Average | Minimum | Maximum | | | |
|-------------|---------------|---------|----------------|---------------|----------------|------------------|
| Duration | 1263 | 1131 | 1402 | | | |
| Delay | 251 | 119 | 390 | | | |
| | To Anticipate | Delay | Up to 3 months | 3 to 6 months | 6 to 12 months | More than 1 year |
| Probability | 0,0% | 100% | 5,4% | 74,2% | 20,4% | 0,0% |

III. Risk Management System in Generation Projects

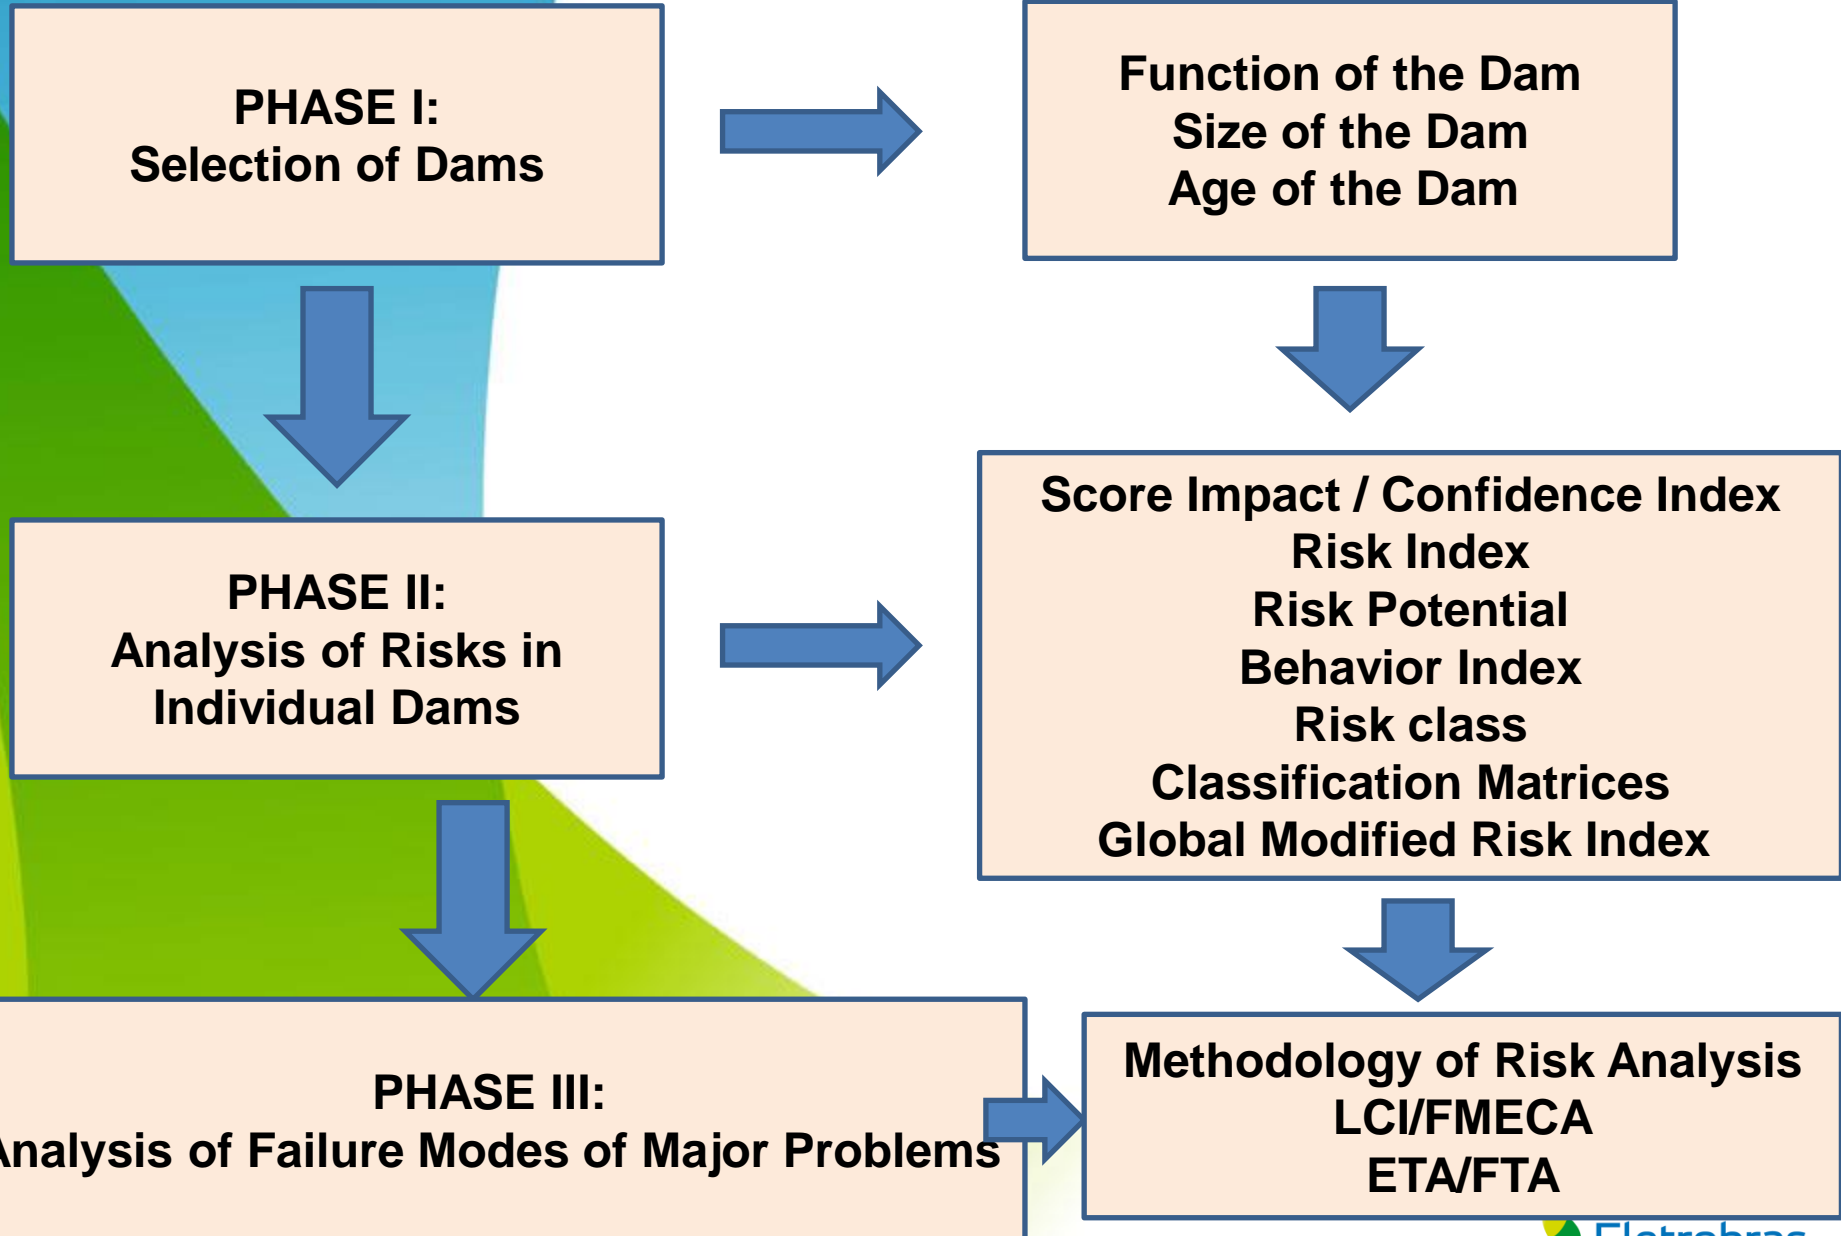

ADVANTAGES:

- ✓ Analysis of complex models;
- ✓ Assists in the decision regarding deadlines and costs;
- ✓ If the model is well planned, there is a good level of precision.

DISADVANTAGES:

- ✓ Project schedule should be well planned and defined;
- ✓ Beware of using best practices for network of activities;
- ✓ Difficulty in interviewing to define the worst and best case;
- ✓ It does not take into account the uncertainties regarding the definition of durations by the specialists.

IV. Risk Analysis for Dam Safety

IV. Risk Analysis for Dam Safety

Risk Matrix of LCI Method

| | | IMPACT | | | | | |
|-------------|---|--------|--------|--------|--------|--------|---|
| | | 1 | 2 | 3 | 4 | 5 | |
| PROBABILITY | 5 | LOW | MEDIUM | HIGH | HIGH | HIGH | 5 |
| | 4 | LOW | MEDIUM | MEDIUM | HIGH | HIGH | 4 |
| | 3 | LOW | SQ4 | MEDIUM | SQ1, 2 | HIGH | 3 |
| | 2 | LOW | LOW | MEDIUM | MEDIUM | SQ3, 5 | 2 |
| | 1 | LOW | LOW | LOW | LOW | LOW | 1 |

| | | IMPACT | | | | | |
|-------------|---|--------|--------|--------|--------|--------|---|
| | | 1 | 2 | 3 | 4 | 5 | |
| PROBABILITY | 5 | LOW | MEDIUM | HIGH | HIGH | HIGH | 5 |
| | 4 | LOW | MEDIUM | MEDIUM | HIGH | HIGH | 4 |
| | 3 | LOW | MEDIUM | BA1, 5 | MEDIUM | HIGH | 3 |
| | 2 | LOW | LOW | BA4 | BA2, 3 | MEDIUM | 2 |
| | 1 | LOW | LOW | LOW | LOW | LOW | 1 |

IV. Risk Analysis for Dam Safety

FMECA (Failure Mode, Effect and Criticality Analysis)

| FUNCTION | FAILURE MODE | CAUSE | EFFECT | P | I | ICR | DETECTION MODE (DM), PREVENTION (PR) | D | RPN |
|---|---|-------------------------------------|--|---|---|-----|---|---|-----------|
| 1. CONCRETE DAM | | | | | | | | | |
| CONTAIN RESERVOIR | 1(1) OVERFLOW (HYDRAULIC FAULTS) | Exceptional water levels | External erosion with dam break | 2 | 20 | 40 | Reservoir lowering (PR) | 2 | 80 |
| | | | | | | | Level monitoring by telemetry system (DM) | | |
| | 1(2) SLOPE SLIP | Exceptional uploads | Global instability with uncontrolle d water release | 1 | 20 | 20 | Reservoir lowering (PR) | 3 | 60 |
| | | | | | | | Visual inspection and instrumentation (DM) | | |
| | | | | | | | Geological mapping (PR) | | |
| | | | | | | | Instrumentation (DM) | | |
| Inadequate material properties | Inadequate foundation properties | 1 | 5 | 5 | Consolidation Injection (DM), Installation of drains (PR) | 2 | 10 | | |
| | | | | | Technological control (PR), Instrumentation (DM), Construction of stabilizer bats (DM), Compression (DM) | | | | |
| | | | | 2 | 8 | 16 | | 1 | 16 |

V. RISK ANALYSIS FOR COST CONTINGENCY

Histograma

SUBSTATION 1

TOTAL COST = R\$ 1.667.892,00
60,57% Probability of cost of the project does not exceed
R\$ 1.780.621,88

EV = R\$ 1.731.505,40 (1%)
(EURO 509.266,00)

Histograma

SUBSTATION 2

TOTAL COST = R\$ 4.011.674,00
63,18% Probability of cost of the project does not exceed
R\$ 4.074.836,71

EV = R\$ 4.059.814,09 (1%)
(EURO 1.194.062,00)

CONCLUSIONS

- ✓ **EACH OBJECTIVE HAS A RISK METHOD**
- ✓ **THERE IS NO METHOD THAT WORKS FOR EVERYTHING**
- ✓ **EACH METHOD HAS ADVANTAGES AND DISADVANTAGES**
- ✓ **THE IMPORTANT IS TO FIND THE BEST TOOL TO MEET THE SPECIFIC OBJECTIVE**

THANK YOU !
